SUMMARY

Third-year AI & Data Science student with hands-on experience across the data analysis lifecycle — collecting and cleaning datasets, performing exploratory data analysis, and building visualization dashboards to communicate findings. Proficient in Python, SQL, and Excel/Tableau/Power BI, with applied statistical modeling and machine learning experience (Scikit-learn, PyTorch). Strong analytical mindset and communication skills, seeking a Data Analyst role to translate business requirements into actionable insights.

EDUCATION

CMR Institute of Technology, Bengaluru *2023 - 2027 (Expected)*
Bachelor of Engineering, Artificial Intelligence and Data Science — CGPA: 8.47/10

St. Xavier Higher Secondary School, Jawlakhel, Nepal *2023*
12th Standard (Science) — GPA: 3.2/4.0

TECHNICAL SKILLS

- **Data Analysis & Visualization:** Pandas, NumPy, SQL, Excel, Tableau, Power BI, Matplotlib, Exploratory Data Analysis, Statistical Analysis
- **Databases:** MongoDB, SupaBase, MySQL/MariaDB
- **Machine Learning & AI:** PyTorch, Scikit-learn, Transformers (ESM-2), NLP, Predictive Modeling, Model Evaluation
- **Languages & Tools:** Python, C, HTML, CSS, JavaScript, Git, Linux, Flask, React

PROJECTS

Student Feedback Sentiment Analysis

- Built an end-to-end data analysis pipeline that collected, cleaned, and processed 1,000+ student feedback entries, classifying each into Positive, Neutral, and Negative sentiment categories.
- Performed exploratory data analysis and text preprocessing (tokenization, stopword removal, lemmatization, TF-IDF vectorization), achieving 88% classification accuracy with Logistic Regression; evaluated results using precision, recall, and F1-score.
- Automated data collection via SMTP and visualized sentiment trends and patterns using Pandas and Matplotlib to support stakeholder reporting.

SoleTrack — Retail POS & Inventory Management System

- Designed a SQL-based data schema (MySQL/MariaDB) to track SKU-level inventory by brand, size, and quantity across an entire retail catalog.
- Built daily sales reports and stock-analytics dashboards that surfaced trends and anomalies to support operational decision-making.
- Implemented role-based authentication (Admin/Cashier) and password hashing to ensure secure, reliable data collection at the point of sale.

ProteinClassify — Transformer-Based Protein Analysis Platform

- Processed and classified large-scale protein sequence data across 321 families using transformer embeddings from Meta's ESM-2 model.
- Built PCA-based embedding visualizations to help interpret high-dimensional model outputs and communicate patterns to end users.
- Delivered a full-stack platform (Flask, PyTorch, React, Vite, Tailwind CSS) supporting batch data upload and real-time analysis.

EXPERIENCE

The FOOT's Nepal — Design & Requirements Analyst *Aug 2025 - Nov 2025*

- Collaborated with business stakeholders to gather and translate requirements for a retail inventory platform (later built as SoleTrack) into functional analytical specifications.
- Designed the underlying data schema covering products, stock, sales, and users to support accurate reporting and analysis.
- Redesigned the inventory tracking workflow, reducing manual data-entry steps and improving data quality for downstream reporting.

CERTIFICATIONS & ACHIEVEMENTS

- Top 3 Finish, CMRIT Departmental Project Exhibition (Nov 2025) — Inventory Management System
- Introduction to Cyber Security (Infosys Springboard); Python for Data Science (NPTEL); Fundamentals of DSA, Grade A (CMRIT)
- Google Skill Badges: Prompt Design in Vertex AI; Build Real-World AI Applications with Gemini and Imagen
- Leadership: Promotion Head / Social Media Manager, RARE Club, CMRIT • Participant, Apticode Hackathon 2025
